

Flexible high-quality packing solutions for all needs

A photograph showing several large wooden cable reels in a factory or warehouse. The reels are made of light-colored wood and are stacked or positioned in a row. In the background, there are industrial structures, including a yellow pillar and overhead lighting. The floor is a dark, polished surface.

versowood

Versowood – Your partner in providing wood packaging solutions

Versowood was founded in 1946 and it has developed into a leading, and biggest private wood processing company in Finland. We are currently exporting our products globally to over 50 countries.

Reliable

For our raw material we use durable wood. Our own wood procurement division procures the raw wood material from certified forests and our sawmills further process raw wood. For this reason, we are able to guarantee our customers flexibility and upkeep our quality in assuring reliable delivery times.

Sustainable and environmentally friendly

Wooden cable drums and pallets are environmentally friendly. The wood is durable and a renewable natural resource. Wood naturally stores carbon, by absorbing carbon dioxide from the atmosphere. It will remain secured in the wood until the end of its lifecycle. One cubic meter of wood binds roughly around 715 kilos of carbon dioxide. By replacing non-renewable resources, such as plastic and metal, with wood, will help store significant amounts of carbon dioxide. Wooden cable drums are long lasting, and they can be repaired and maintained. As the drum reaches the end of its lifecycle, it can be recycled in an environmentally friendly manner.

Choose wood – the natural carbon binder. And as your reliable and long-term partner – choose Versowood.

Packing solutions for all industries

Spread around the country, our packing solution units manufacture pallets, plywood boxes and cable drums, and also offer related support services.

Our primary customer is the manufacturing industry. In addition to customised solutions, that are designed and manufactured to meet the customers' specifications, our units also produce standardised products, such as EUR and FIN pallets, and K-Standard wooden cable drums. Due to our extensive network of production factories, the products can be transported to their destination with flexibility and competitive delivery times.

Services to support our customers

In addition to the production of packing solutions, Versowood provides its customers with a wide range of services, from storage and logistics to product maintenance and appropriate disposal. Services are offered in both Versowood's and the customers' premises.

We monitor our contract customers' consignment stock levels and restock automatically, thus streamlining stock turnover. Customers pay for the products they use.

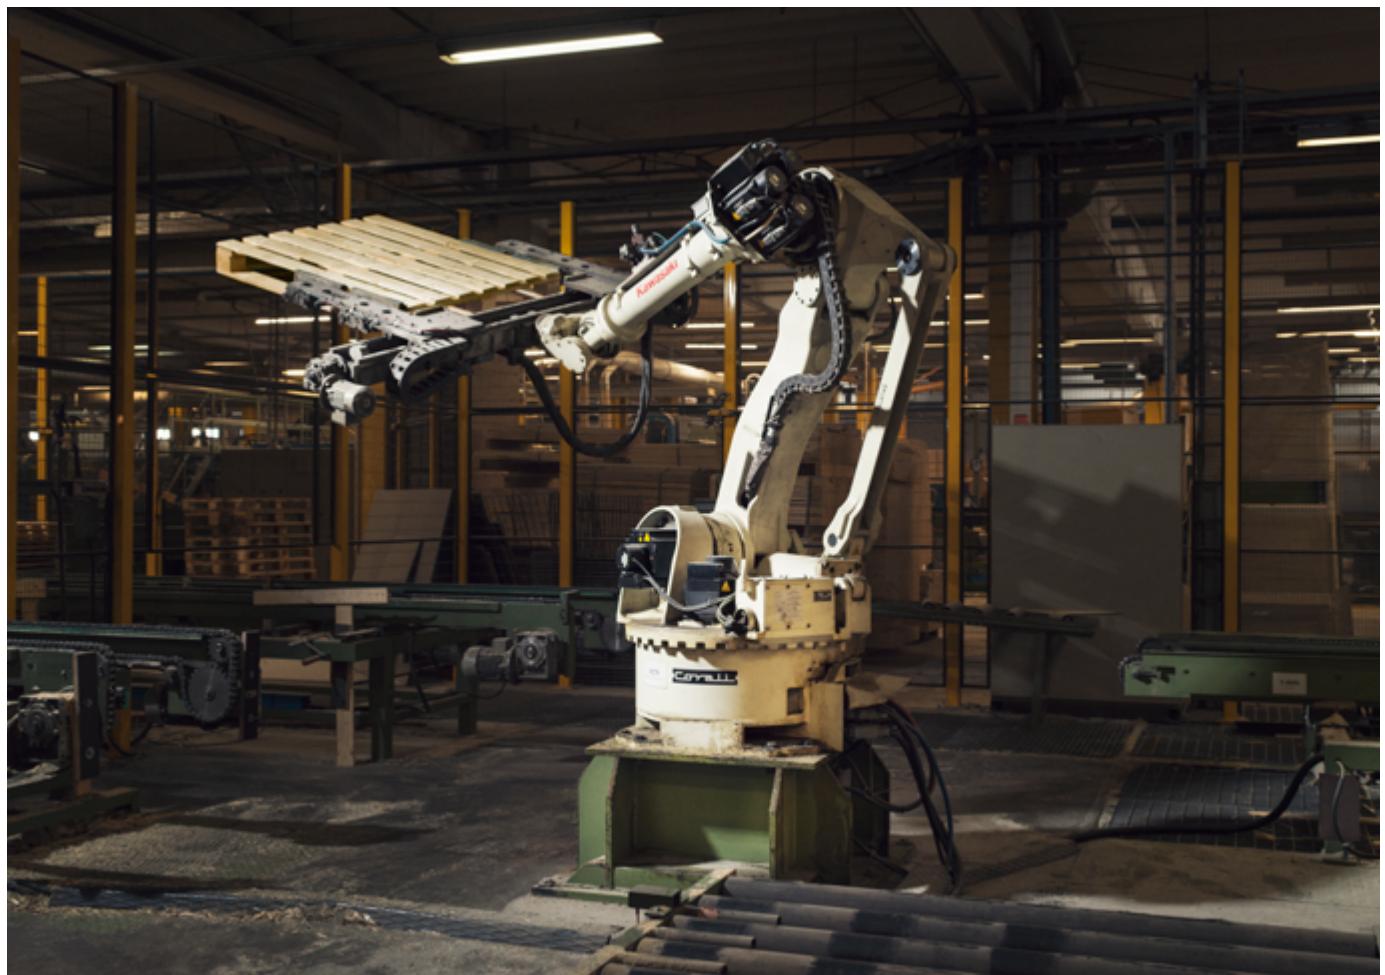

Pallets for industrial needs

Around 3.7 million pallets are manufactured in Versowood's factories every year. In addition to pallets manufactured to customer specifications, our product range includes standardised EUR and FIN pallets. Pallets are made from timber that comply with the requirements set forth in the ISPM 15 standard.

The wooden pallets are manufactured on automated production lines from raw material that originate from Versowood's own sawmills. With efficient production, well-thought logistics and production factories distributed around the country, we are able to deliver even small batches of custom-made products quickly.

The pallet centres located in conjunction with Versowood's production factories accept de-commissioned and broken pallets from industrial customers. The pallets returned to us are either sorted, repaired and resold, or appropriately disposed of.

Our pallet production, sale and service operations are in compliance with the ISO 14001:2004 standard for environmental management systems.

Cable drum management services

Versowood offers comprehensive cable drum management services – at the customer's premises, if necessary.

The purpose of cable drum management is to streamline operations, ensure the timely availability of drums and make sure that the drums are checked and repaired regularly. Systematic management improves the recyclability of drums, speeds up stock turnover and helps to make sure that the capital tied in the drums is used efficiently.

Drum management services are offered at designated Versowood sites around Finland. Drums returned to us are checked and repaired, if necessary stored, and either returned back to use or they are disposed in an environmentally friendly manner. During the check-up, the condition and durability of the drums are also observed from the productional point of view, in order to come up with even better solutions.

Durable cable drums

Versowood's durable high-quality timber drums are manufactured in Riihimäki and Haukipudas. Our Estonian unit cuts plywood and offers comprehensive timber drum services to customers in the Baltic region. They also offer customised plywood reels and assemble plywood boxes based on customer specifications.

Versowood manufactures wooden drums up to 3'900mm in diameter, from high-quality timber, produced at the company's sawmills and dried according to the ISPM 15 standards. In addition to timber, drums can also be made from plywood. We focus both on the domestic, as well as the export market, by delivering drums either assembled or in parts. Considering the freight, we recommend partly assembled drums, as the cost per drum remains lower.

Versowood, the biggest privately owned sawn timber producer and processor in Finland

Versowood has a turnover of approximately EUR 400 million, and the company has around 800 employees in its 12 Finnish and 1 Estonian units. Versowood produces approximately 1.35 million m³ of sawn timber products annually. In addition, the company manufactures other refined goods, such as planed, painted and impregnated products, glulam products and structures, timber elements, telephone and electric poles, wooden bridges, sound barriers, various wood packages, forest-based energy, and heating pellets.
